

## RESPONSE TO THE INTERIM REPORT SURVEY

*Note: Responses were automatically limited to 255 characters unless otherwise indicated*

### Name

Amanda Rowe

### Do you give permission for your submission to be published?

Yes - with my name and organisation

## NATIONAL LEVEL PROTECTION AND CONSERVATION OF THE ENVIRONMENT AND ICONIC PLACES

**Legally enforceable National Environmental Standards should be the foundation for effective regulation. The Standards should focus on outcomes for matters of national environmental significance, and the fundamentally important processes for sound and efficient decision-making. Standards will provide certainty—in terms of the environmental outcomes the community can expect from the law, and the legal obligations of proponents.**

### Strongly agree

**The goal of the EPBC Act should be to deliver ecologically sustainable development. The Act should require that National Environmental Standards are set and decisions are made in a way that ensures it is achieved. The Act should support a focus on protecting (avoiding impact), conserving (minimising impact) and restoring the environment.**

### Disagree

Some areas should not be developed at all. The act should focus on the environment and biodiversity conservation

**A greater focus on adaptive planning is required to deliver environmental outcomes. Regional plans should be developed that support the management of cumulative threats and set clear rules to manage competing land uses at the right scale.**

### Agree

Agree but it should not be a tick box one size fits all exercise

**Strategic national plans should be developed for big-ticket, nationally pervasive issues such as the management of feral animals or adaptation of the environment to climate change. These plans should guide the national response and enable action and investment by all parties to be effectively targeted and efficient.**

### Strongly agree

Please form a national climate change action plan as a matter of urgency

## INDIGENOUS CULTURE AND HERITAGE

**The National Environmental Standards should include specific requirements relating to best practice Indigenous engagement, to enable Indigenous views and knowledge to be incorporated into regulatory processes.**

**Agree**

Agree but I think this approach is still placing Indigenous views as a sideline consideration instead of acknowledging they are actually best practice and our entire country's ecosystems are heavily reliant on this management

**The national level settings for Indigenous cultural heritage protection need comprehensive review. This should explicitly consider the role of the EPBC Act in providing protections. It should also consider how comprehensive national level protections are given effect, including how they interact with the development assessment and approval process of the Act.**

**Strongly agree**

Cultural heritage protection is currently a complete failure and mining companies are destroying cultural heritage

**Indigenous knowledge and western science should be considered on an equal footing in the provision of formal advice to the Environment Minister. The proposed Science and Information Committee should be responsible for ensuring advice incorporates the culturally appropriate use of Indigenous knowledge.**

**Disagree**

Indigenous knowledge where it can be found should be considered best practice. Western methodology can only support its not proven as Aboriginal knowledges are

**Where aligned with their aspirations, transition to Traditional Owners having more responsibility for decision-making in jointly managed parks. For this to be successful in the long term there is a need to build capacity and capability, so that joint-boards can make decisions that effectively manage risks and discharge responsibilities.**

**Disagree**

Aboriginal people do not operate on boards. Elders in a community setting should be listened to. Boards will only find Aboriginal people trying to fit in with white man's answers. Go into communities and talk.

**Improved outcomes for Indigenous Australians will be achieved by enabling co-design and policy implementation.**

**Disagree**

That language has nothing to do with Aboriginal Australia. That is white man's talk.

**The role of the Indigenous Advisory Committee should be substantially recast as the Indigenous Knowledge and Engagement Committee, whose role is to provide leadership in the co-design of reforms and advise the Environment Minister on the development and application of the National Environmental Standard for Indigenous engagement.**

**Disagree**

Not the right model

#### LEGISLATIVE COMPLEXITY

**In the short-term, legislative amendments to the EPBC Act are required to address known inconsistencies, gaps, and conflicts in the Act.**

**Disagree**

If it means a watering down of protections then no

**In the longer-term, a comprehensive redrafting of the Act (or related Acts) is required. This should be done following the development of the key reforms proposed by this Review. This sequencing will ensure that legislation is developed in a way that supports the desired approach, rather than inadvertently hindering it.**

**Not applicable**

**Redrafting could include consideration of dividing the Act—such as creating separate pieces of legislation for its key functional areas.**

**Not applicable**

#### EFFICIENCY - REMOVING DUPLICATION

**Devolve decisions to other jurisdictions, where they demonstrate National Environmental Standards can be met.**

**Disagree**

This already happens and leads to rubber stamping by development hungry state governments

**To base devolution on sound accreditation, quality assurance and compliance, escalation (including step-in capability) and regular review.**

**Not applicable**

**Assessment pathways should be rationalised and implemented with clear guidance, modern systems and appropriate cost recovery. Small investments can dramatically reduce cost and uncertainty and improve decision-making.**

**Disagree**

The wildlife trade is a terrible cost to Australia's biodiversity for very little Australian profit

**These, and other reform directions proposed (National Environmental Standards, regional plans, information and data, modern regulatory systems) create opportunities for significant streamlining and efficiency, including where low risk actions will not require approval.**

**Disagree**

**Streamline provisions for permitting of wildlife trade and interactions with other environmental frameworks.**

## **Strongly disagree**

### TRUST IN THE EPBC ACT

Improve community participation in decision-making processes, and the transparency of both the information used and the reasons for decisions.

## **Strongly agree**

Provide confidence that decision-makers have access to the best available environmental, cultural, social and economic information.

## **Strongly agree**

Amend the settings for legal review. While retaining extended standing, provide for limited merits review for development approvals. Legal challenges should be limited to matters of outcome, not process, to reduce litigation that does not have a material impact on the outcome.

## **Strongly disagree**

### DATA, INFORMATION AND SYSTEMS

A national 'supply chain' of information is required so that the right information is delivered at the right time to those who need it. This supply chain should be an easily accessible 'single source of truth' on which the public, proponents and governments can rely.

## **Strongly agree**

To deliver an efficient supply chain, a clear strategy is needed so that each investment made contributes to building and improving the system over time.

## **Agree**

A custodian for the national environmental information supply chain is needed. The Commonwealth should clearly assign responsibility for national level leadership and coordination. Adequate resources should be provided to develop the systems and capability that is needed to deliver the evidence base for Australia's national system of environmental management.

## **Agree**

A National Environmental Standard for information and data should set clear requirements for the provision of data and information in a way that facilitates transparency and sharing. The standard should apply to all sources of data and information, including information collected by proponents.

## **Agree**

To apply granular standards to decision-making, Government needs the capability to model the environment, including the probability of outcomes from proposals. To do this well, investment is required to improve knowledge of how ecosystems operate and develop the capability to model them. This requires a complete overhaul of existing systems to enable improved information to be captured and incorporated into decision-making.

**Agree**

#### MONITORING, EVALUATION AND REPORTING

A coherent framework to monitor and evaluate the effectiveness of the EPBC Act in achieving its outcomes and the efficiency of its implementation should be developed. The framework must be backed by a commitment to its implementation.

**Strongly agree**

A revamp of national SoE reporting should incorporate trend analysis and address future outlooks to provide the foundation for national leadership on the environment.

**Strongly agree**

National environmental economic accounts will be a useful tool for tracking Australia's progress to achieve ecologically sustainable development (ESD). Efforts to finalise the development of these accounts should be accelerated, so they can be a core input to SoE reporting.

**Agree**

#### RESTORATION

The EPBC Act should require offsets to be considered only when options to avoid and then mitigate impacts have been actively considered, and demonstrably exhausted.

**Strongly agree**

The EPBC Act should require offsets, where they are applied, to deliver protection and restoration that genuinely offsets the impacts of the development, avoiding a net loss of habitat.

**Strongly agree**

The EPBC Act should incentivise investment in restoration, by requiring decision-makers to accept robust restoration offsets, and create the market mechanisms to underpin the supply of restoration offsets.

**Strongly agree**

There are opportunities for government to explore policy mechanisms to accelerate environmental restoration including those to leverage the carbon market, which already delivers restoration, to deliver improved biodiversity in suitable habitat types.

**Agree**

There are opportunities for government to explore policy mechanisms to accelerate environmental restoration including those to co-invest with the philanthropic and private sectors, including funding innovation to bring down the cost of environmental restoration, growing the habitat available to support healthy systems.

**Agree**

## COMPLIANCE, ENFORCEMENT AND ASSURANCE

**Establish a modern, independent regulator responsible for monitoring, compliance, enforcement and assurance to be a strong cop on the beat.**

**Strongly agree**

**Increase the transparency of activities.**

**Strongly agree**

**Effectively draw on Standards, simplified law, and better systems to increase compliance and simplify enforcement and assurance.**

**Strongly agree**

**Shift focus toward assurance of devolved decision-making and monitoring, compliance and enforcement of national strategic plans, regional plans, offsets and regeneration.**

**Strongly disagree**

**Provide the regulator with a full suite of modern regulatory monitoring, compliance, enforcement and assurance tools and adequate funding.**

**Strongly agree**

## PROPOSED REFORM PATHWAY

**Do you broadly agree with the phased approach proposed by the Review?**

**Strongly disagree**

## BROADER VIEWS (no character limit)

**What has been missed?**

Environmental and biodiversity conservation protection and enforcement. This is an exercise in shirking that responsibility.

**How could the proposed reform directions be improved?**

The commonwealth could actually use and enforce the act to protect the environment

**Are there fundamental shortcomings that would require the Reviewer to rethink?**

Devolution = shirking responsibility, the wildlife trade is cruel and only will destroy biodiversity
